Education

B.Sc.Eng in Computer Engineering

University of Ruhuna

GPA: 3.58

2nd Class Upper

Certifications

- ▶ Blockchain with Cardano
CoinCeylon (2025)
- ▶ Blockchain Fundamentals
Cardano Foundation (2026)
- ▶ Aiken Smart Contract
Cardano Foundation (2026)
- ▶ AI & Blockchain for Business
Cardano Foundation (2026)

Biography

A highly motivated Computer Engineering graduate specializing in Cardano blockchain development, with hands-on experience in building scalable DApps. Proficient in developing secure smart contracts using Aiken and integrating blockchain functionality into modern web applications with MeshJS and Next.js. Demonstrated expertise in wallet integration, on-chain transaction handling, and NFT-based solutions, including minting and burning mechanisms. Passionate about leveraging the Cardano ecosystem to deliver efficient, user-centric Web3 solutions and continuously advancing technical skills to contribute to innovative blockchain-driven systems.

Work experience

Software Engineer Intern

Invicta Innovations (Pvt) Ltd

07/2024 - 01/2025

Worked as a Full-Stack Developer using Java Spring Boot and React.js during a 7-month internship. Enhanced application modules, delivered 20+ feature improvements and bug fixes, and collaborated with cross-functional teams to ensure timely project delivery.

Projects

Cardano Transaction Dashboard

Next.js, TypeScript, MeshJS, Blockfrost

2026

Built a full-stack blockchain dashboard using Next.js and TypeScript to track and visualize Cardano transactions. Integrated wallet connectivity using React wallet hooks (useWallet, useAddress, useLovelace) from MeshJS. Enabled real-time transaction fetching via Blockfrost API, including balance tracking and detailed transaction views with a responsive UI.

Cardano Native Asset Manager

Next.js, TypeScript, MeshJS, IPFS, Pinata

2026

Built a decentralized application for managing Cardano native assets using Next.js and TypeScript. Implemented NFT minting and burning with CIP-721 metadata standard and integrated IPFS (Pinata) for decentralized storage. Utilized React wallet hooks for secure wallet interaction and seamless user experience in asset management.

Cardano Shipment Tracker DApp

Next.js, TypeScript, Tailwind CSS, Cardano, Aiken, MeshJS, Blockfrost

2026

Built a decentralized shipment tracking application on the Cardano blockchain using Aiken smart contracts for on-chain shipment validation and status management. Orchestrated shipment creation, sender and receiver tracking, product status updates, datum and redeemer handling, and secure transaction validation through custom Aiken validators. Integrated Cardano wallet connectivity, UTxO-based transaction processing, and blockchain data retrieval using MeshJS and Blockfrost. Developed a responsive user interface for transparent shipment monitoring, on-chain verification, and real-time supply chain tracking.

Skills

Programming Languages

Aiken, Haskell, C, C++, Java, JavaScript, TypeScript, Python

Web Development

HTML, CSS, React.js, Next.js, Spring Boot, REST APIs, Tailwind CSS, Material UI

Blockchain

Cardano, Aiken Smart Contracts, MeshJS, Blockfrost API, CIP-721 NFT Standards, Wallet Integration, IPFS, Pinata, Web3 DApp Development

Databases

PostgreSQL, MySQL, MongoDB, Firebase

Cloud & DevOps

Docker, CI/CD, Kubernetes, Apache Kafka, Vercel

AI & ML

TensorFlow, OpenCV, MediaPipe, Computer Vision, Deep Learning Fundamentals, AI Integration

Tools

Git, GitHub, Postman, VS Code, IntelliJ IDEA, Figma

Soft Skills

- Problem Solving
- Team Collaboration
- Adaptability
- Analytical Thinking
- Agile Development

Interests

- ▶ Coding
- ▶ Chess

GreenDot Chain

2026

Next.js, TypeScript, Tailwind CSS, Cardano, MeshJS, Blockfrost, IPFS, Supabase

Built a blockchain-powered sustainability proof verification platform inspired by IPL Green Dot Ball initiatives using Cardano blockchain. Enabled SHA256-based image verification, IPFS decentralized storage integration, QR-based public proof verification, and duplicate proof prevention using Supabase. Integrated Cardano wallet connectivity and on-chain metadata storage with MeshJS and Blockfrost, along with professional blockchain certificate PDF generation and responsive modern UI development.

ArtifyChain

2026

Next.js, TypeScript, Tailwind CSS, Cardano, MeshJS, Blockfrost, Pinata, IPFS, Cloudflare Workers, Stable Diffusion

Created an AI-powered NFT creation and minting platform that combines generative AI with Cardano blockchain technology. Integrated AI image generation using Stable Diffusion, decentralized metadata and image storage through IPFS and Pinata, Cardano wallet connectivity, NFT minting with MeshJS, and on-chain asset verification using Blockfrost. Built a modern responsive interface for generating, previewing, minting, and verifying AI-created digital assets.

Fundora – Crowdfunding DApp

2026

Next.js, TypeScript, Tailwind CSS, Cardano, Aiken, MeshJS, Blockfrost, Framer Motion

Implemented a decentralized crowdfunding platform powered by Cardano smart contracts. Engineered campaign creation, ADA contribution handling, campaign status management, contributor tracking, creator withdrawal functionality, and on-chain campaign datum updates using MeshJS and Blockfrost. Designed Aiken smart contract validators for contributions, campaign success and failure handling, and secure fund withdrawals, while delivering a modern responsive UI and seamless Cardano wallet integration for blockchain interaction.

LookTrackVision

2025

Python, TensorFlow, OpenCV, MediaPipe, CNN, Computer Vision, Gradio

Developed a real-time gaze tracking system to enable hands-free computer interaction using webcam-based eye tracking. Engineered CNN-based gaze direction prediction, facial landmark detection with MediaPipe, blink detection using Eye Aspect Ratio (EAR), and voice command integration for application control. Designed as a cost-effective Human-Computer Interaction (HCI) solution to improve accessibility and user interaction.
